

Thoughts of *John Zysman*, Professor of Political Science, UC – Berkeley, founder of the Berkeley Roundtable on the International Economy

USTR needs to rethink its objectives with special attention to:

1. Climate/Global Warming
 - A. Consider joint intellectual property development (e.g. R&D on clean coal)
 - B. Pre-competition R&D support
2. Global financial systems: Macro access to money
3. What drives job creation
 - A. Nature of outsourcing needs reconsidering/ Most industries have failed to rethink production processes (India software)

Should USTR harvest technologies from abroad?
